Pharmacy Management: Essentials for All Practice Settings 4th Edition
Shane Desselle, David Zgarrick, Greg Alston

Summary

#1 Pharmacy Management Text!!! As pharmacy practice moves from a product orientation to a patient orientation, there are unique challenges that arise in managing the value-added services that pharmacists are developing to meet patient needs in medication therapy management. A section of this book is dedicated to the planning, implementation, and reimbursement of these new patient care services offered by pharmacists.

Several chapters are dedicated to describing the risks inherent in pharmacy practice, and the impact that laws, regulations, and medication errors have on pharmacy management. The final section describes how management functions are applied in specific pharmacy practice settings (independent, chain, health systems, managed environments, safety net operations), and settings in unique health systems.

Each chapter is divided into several sections to facilitate the reader's understanding and application of the material. Chapters begin with a list of learning objectives that outline the major topics to be addressed. A brief scenario is used to describe how a pharmacy student or pharmacist may need or apply the information described this chapter in their daily lives or practice. Questions at the start of each chapter provide direction and assist the reader in understanding what they can expect to learn.

The text of each chapter provides comprehensive coverage of the content and theory underlying the major concepts. References to the management and pharmacy literature are commonly used to provide readers with links to additional background information. Explanations and applications are also used to help readers better understand the need to master and apply each concept. Questions at the end of each chapter encourage readers to think about what they have just learned and apply these concepts in new ways.
